3 easy steps

Reduce adulteration and increase positivity rates with oral fluid

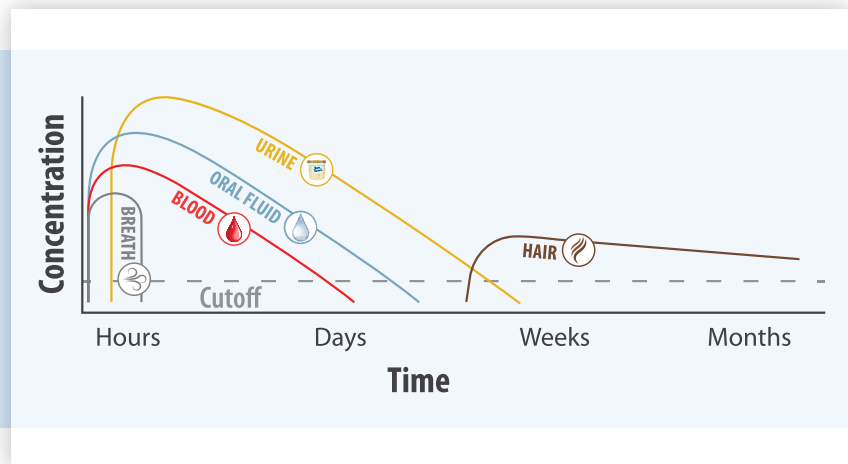

SAMHSA drug panel	Urine analysis	Saliva analysis
Overall positivity rate	5.5%	13.6%
Amphetamine/ Methamphetamine	1.3%	1.24%
Cocaine	0.22%	0.58%
Marijuana	3.6%	12.3%
Oxycodone	0.29%	0.24%
PCP	0.009%	0.04%

Proven clinical lab accuracy¹

Oral fluid lab-based testing has been outperforming and outpacing urine lab-based testing since 2009 and more than doubled the overall positivity rates in 2020.

Intercept® Oral Fluid Drug Test assays also include barbiturates, benzodiazepines and methadone.

Oral fluid is able to detect recent drug use, making it a first choice for under the influence or potential impairment testing.²
